**Tectonic Geomorphology of Mountains: A New Approach to Paleoseismology** William B. Bull

With a balance of theory and practical applications, *Tectonic Geomorphology of Mountains* is essential reading for research geologists and upper-level undergraduate and graduate students in the earth sciences.

- This book describes how tectonic events influence geomorphic processes and explores how landscapes respond to tectonic deformation in the ways in which they are weathered, washed, and abraded
- Uses new approaches to enhance theoretical models of landscape evolution and to solve practical problems such as the assessment of earthquake hazards
- Includes previously unpublished research and theory
- Examines how to use key landforms as reference levels in changing landscapes, estimate rates of mountain-range uplift, and map seismic shaking caused by prehistorical earthquakes
- Presents a diverse range of examples from around the world
