Ultrafast Reaction Dynamics and Solvent Effects: Proceedings of the international Research Workshop, France, August 1993 (AIP Conference Proceedings)

This text concerns itself with experimental and theoretical aspects of reaction dynamics in solution and considers advances in the spectroscopy of transient states and computational solution chemistry. Different aspects of primary events of a reaction are discussed in the framework of classical or quantum theories. Topics include reactivity in clusters and microaggregates; activated dynamics in liquids; electronic dynamics in solutions; proton transfer in hydrogen-bonded systems; solvation dynamics and reactive events; and charge transfer reaction in molecular liquids. This book is intended to be of use to experimentalists and theorists who work in chemical physics and physical chemistry, with particular emphasis on the fundamental aspects of reaction dynamics in clusters and liquid phases.
